

# Higher Yields. Quality Grain.

**Genuity™ VT Triple PRO™ provides dual modes-of-action against above-ground pests, and is stacked with below-ground insect protection. It is also approved for a 20% refuge in the South.**

Years of product testing and research have led to Genuity™ VT Triple PRO™, which controls a broader spectrum of above-ground insects such as corn earworm, corn borer and fall armyworm. Control of ear-feeding insects provides higher yield potential and reduces the risk of mycotoxin development.
